

Multisensory Integration in Ultra-Low Vision

- **Do you or does your loved one have very low vision?**
- **Do you use assistive technology to help you manage and get around, and not depend exclusively on a sighted guide?**
- **Are you 12+ years old?**

In the Multisensory Integration in Visual Impairment (MIVI) lab, we are studying ways to improve how people with very low vision combine multiple senses to carry out daily activities.
